

DATADOG AGENT (STATSD)

▶ APM/Tracing

```
datadog-statsd:  
  chart: datadog  
  version: 1.11.2  
  repository: stable  
  set-values:  
    service.annotations.dummyannotation: ""  
    daemonset.enabled: "false"  
    deployment.enabled: "true"  
    kubeStateMetrics.enabled: "false"  
  datadog:  
    apiKey: "${DATADOG_API_KEY}"  
    volumeMounts:  
      - name: confd  
        mountPath: /etc/datadog-agent/datadog.yaml  
        readOnly: true  
        subPath: datadog.yaml  
    confd:  
      datadog\.yaml: |  
        use_dogstatsd: true  
        dogstatsd_port: 8125  
        dogstatsd_non_local_traffic: true
```

RBAC-MANAGER

▶ Manage RBAC Bindings

```
rbac-manager:  
  repository: reactiveops-stable  
  chart: chart  
  version: master  
  namespace: rbac-manager  
  hooks:  
    post install:  
      - kubectl apply -f manifests/rbac-definition.yaml
```
